Allowable Subject Matter

Claims 1-4, 6-18, and 20-23 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not teach the claimed process or a product made by the claimed process. The closest prior art, Honda (JP 2003-277308) teaches a process comprising reacting resorcinol and formaldehyde in the presence of an inorganic salt that is preferably calcium chloride to reduce the molecular weight of the resorcinol resin (Example). Honda et al. is silent towards the use of organic solvents in the reaction medium or in the purification process. Further Honda et al. does not teach adding the catalyst after stirring the mixture at a liquid temperature not higher than the boiling point of the organic solvent to form two-phase system containing no remaining solid matter. While biphasic reaction mixtures (Yamaguchi et al.) and extraction with organic solvent (Honda et al.) are known in the art there is insufficient motivation to combine the references and arrive at the specific claimed process steps and amounts absent improper hindsight. Additionally, the claimed process produces a materially different product than the process of Honda. The process of the instant invention produces a different ratio of molecular weights than the resin of Honda (Table 1 vs. Fig. 1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
